

Introduction To Azure Storage-1

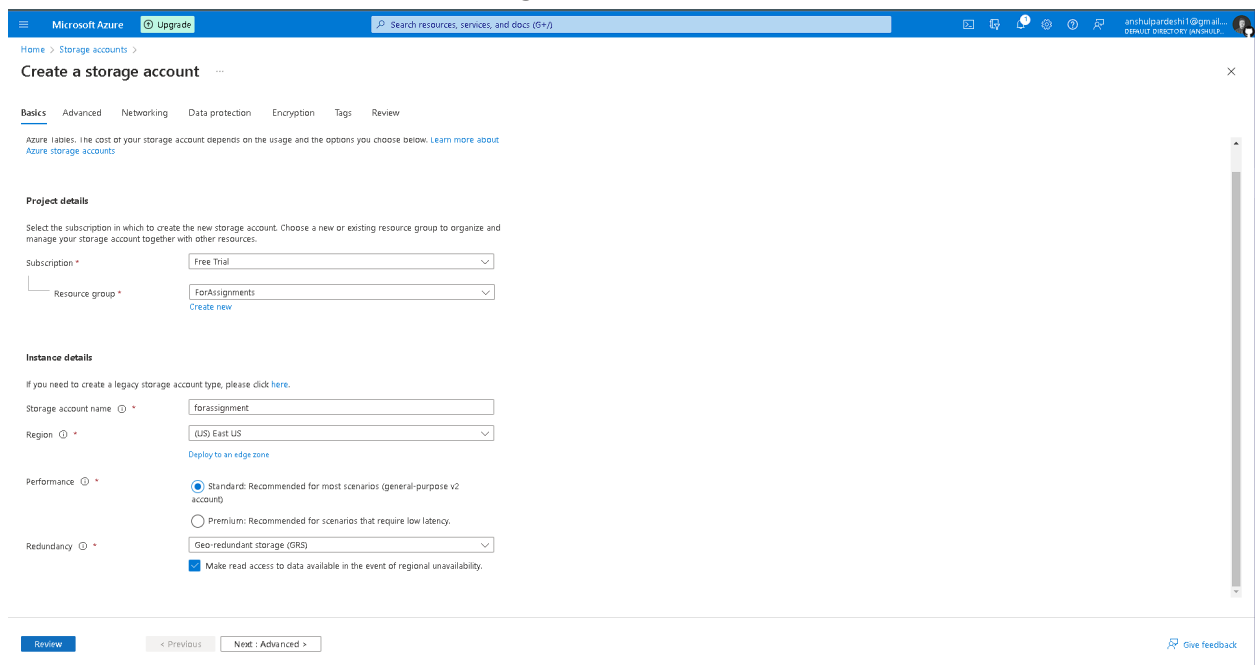

Do the following:

1. Create a storage account.
2. Connect storage explorer to this storage account.

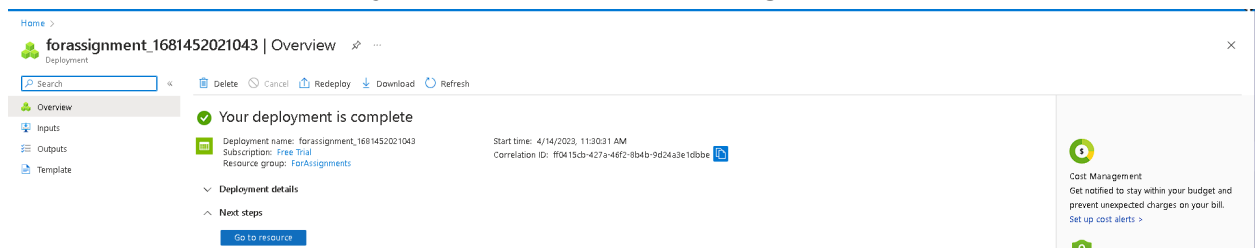

Let us create a storage account. Search for storage account and click on + to create a new one.

Let all the things be default, review & create.

Deployment is complete, click on goto resource.

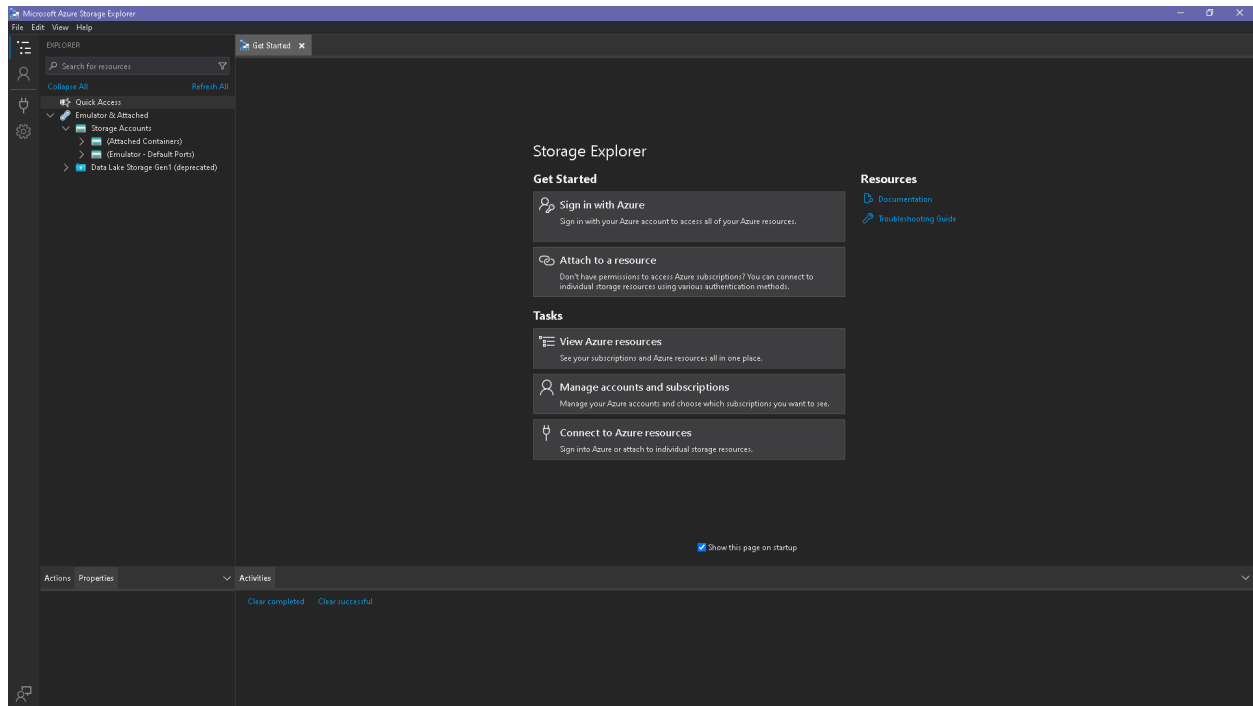

Now to connect storage explorer you need to download it from microsoft's website:

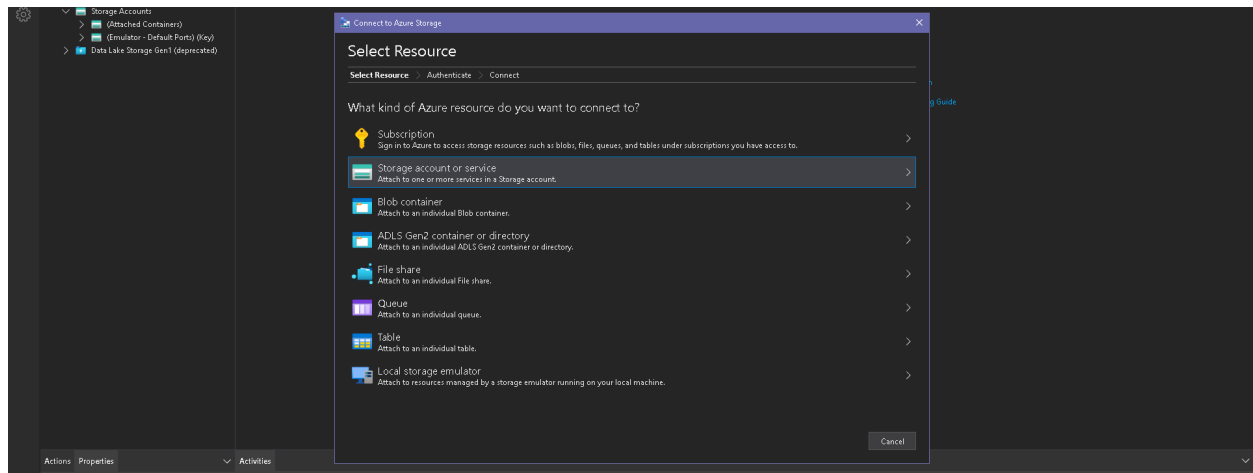

<https://azure.microsoft.com/en-us/products/storage/storage-explorer/>

Download and install.

Click on connect to Azure Resources.

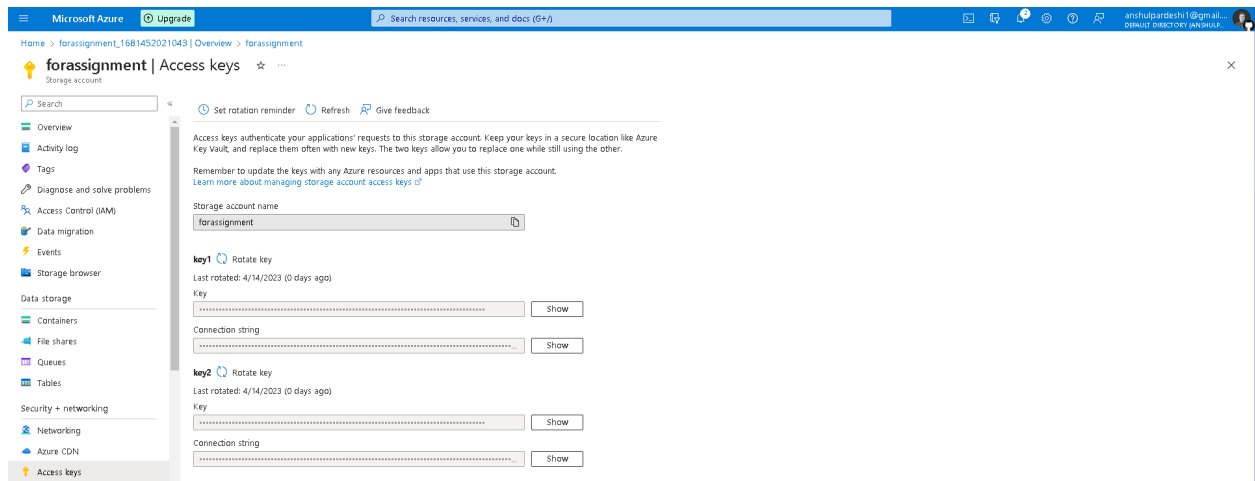

Click on connect to storage account or service.

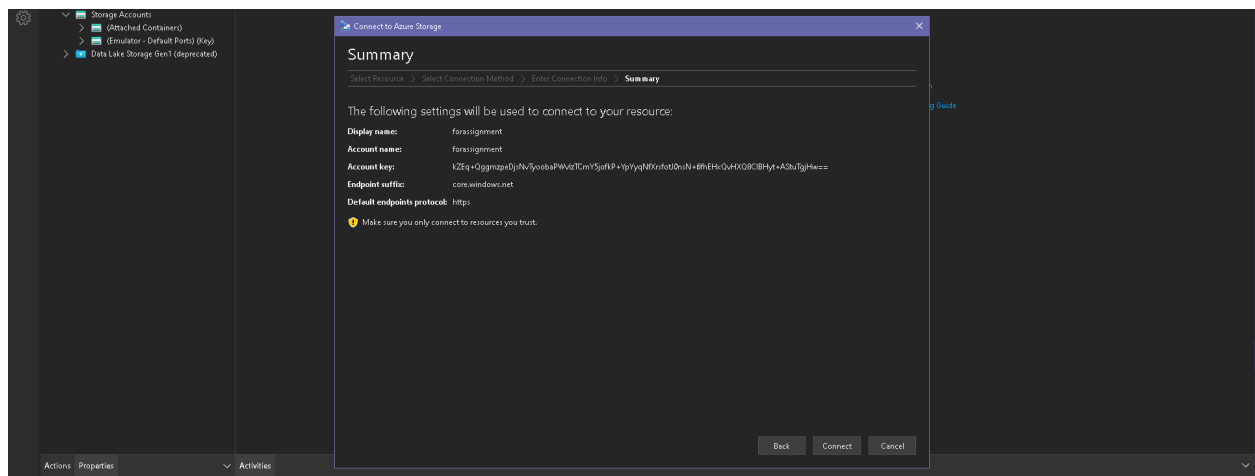

You can choose various methods to connect. I will be using Azure Account name and key.

You can get account name and key in storage account access keys from azure portal.

Enter credentials and click on connect.

Your storage account is now connected to storage explorer.
